

Game 2 8/19/20

1. What is the seat number that you are sitting on in class:
We need this for ISU: 5 second to last row

2. What are the most common mistakes students do when starting at the university?

Time management mistakes

3. Looking at the cycle of inquiry, what are your felt difficulties? Please express and reflect on them

Time Management- I still don't have a system that allows me the flexibility to change and the rigidity to maintain.

Learning- learning how to learn, figuring out that projects with fast fail rates (such as programming) are where I learn the fastest.

4. Let us see our reasoning and solving a problem. If Jill does a job in 15 minutes, and John does it in 45 minutes. How long would it take them if they work together? Show your work, and detail.
Depends on too many factors, the job at hand (if it is a physical job than it would be easier), if Jill and John know each other, how Jill and John interact socially, and if they form a union.
